Banned Code - Programs - Scripts

Some programs and scripts used on the internet are known to cause servers to slow down by monopolizing the processor and ram memory. Others scripts and programs demand high levels of bandwidth. In order to provide maximum server performance to all of our customers, designhostseo limits the use of certain scripts and programs. In addition, the banned scripts have a high risk of violating the Acceptable Use Policy, which will result in automatic disabling of banned scripts and programs, and/or account suspension.

If your website requires the use of such scripts or programs, we recommend either a Virtual Private Server, Semi-Dedicated Server, or a Dedicated Server, ensuring the highest quality environment is available to support your resource intensive website without diminishing the level of service provided to our other customers.

Please note that even with approved scripts, bulletin boards, forums, galleries, that become extremely popular (busy) may place extremely high demands on our servers and bandwidth. If you start to experience rapid membership growth and usage, please feel free to contact us and we will be pleased to recommend a cost-effective alternative.

Bulletin Board Systems & Forums:

Banned:

- UBB - Ultimate Bulletin Board Provided by Infopop Corporation.
- YABB - Yet Another Bulletin Board Provided by Xnull Network.
- IkonBoard

Recommended Alternative(s):

Banned Code - Programs - Scripts

- [WebSite Wizard](#)
- [WebSite Magician](#)
- [osCommerce](#)
- [phpNuke](#)
- [PostNuke](#)

We are not judging the quality of the banned scripts and programs, but making a decision based on monitoring the server load while these items are in operation. It has been observed that these programs load the servers in a way that is unfair to other shared hosting customers.

We hope you understand, and thank you for adhering to these guidelines.
